Construction and Demolition Recycling Guide

CALGreen Requirements for C&D

Effective January 1, 2017

CALGreen Building Code Update 2014

Effective January 1, 2017, CALGreen mandates permitted new residential and non-residential building construction, demolition and certain additions and alteration projects to recycle and/or salvage for reuse a minimum 65 percent of the nonhazardous construction and demolition (C&D) debris generated during the project. (Title 24 Part 11 CALGreen sections 4.408, 5.408, 301.1.1 and 301.3).

Additions to non-residential buildings or structures of at least 1,000 square feet or alterations with an estimated construction cost of at least \$200,000 shall divert from landfills at least 65 percent of nonhazardous C&D materials. Additions and alterations to residential buildings that increase the structure's conditioned area, volume or size are also required to meet the 65 percent minimum diversion requirement.

CALGreen allows several methods of compliance:

- 1) Enforcing agencies can require contractors to develop and maintain a waste management plan and document diversion and disposal.
- 2) Utilize a waste management company that certifies a minimum 65 percent waste diversion.
- 3) Use disposal rates for new construction and demolition projects with a combined disposal weight of less than 4 lbs/ft² in low rise (3 stories or less) new residential structures or 2 lbs/ft² in non-residential and high rise (4 stories or more) residential buildings meet the 65 percent minimum diversion requirement.

How do I comply with CALGreen?

Meeting the requirements of CALGreen is easy if you know where to start.

1 Go to the building/planning department of the city where your project is located to obtain a permit.

You are helping to keep the Bay Area beautiful!

2

Ask if your project needs a Construction Waste Management Plan completed. (CWMP)

5 Provide documentation to the enforcing agency which demonstrates compliance with CALGreen CWMP. (Save your disposal and recycling receipts including subcontractors ones)

5

4

Reduce, Reuse & Recycle your materials at the project site.

Material	Reuse	Recycle	Dispose	Facility/Service Providers to be used*
Concrete				
Brick				
Asphalt				
Curbs				
Construction Paper				
Cardboard Box				
Construction Paper				
Insulation				
Other				

*Please agree with the local Director of Recycling about the recycling services they offer. Also refer to the Contra Costa Builder's Guide for Recycling Construction and Demolition Debris Recycling Resources. (The guide is available online at www.recyclemore.com)
 **Materials containing lead or treated wood to be handled separately per new Federal law.

3

Turn in the completed CWMP with permit documents. (You can find this form online on City's website or at www.recyclemore.com).
